

From the desk of
Annalise Zerweier of the
Suspicious Infection
Investigation League

April 25, 2018

To all concerned citizens,

After thorough investigation, I have determined that I have attained enough information about the E.N.D. (embedded nucleotide disease) to come forward. As was discovered in a coded note in these past months and expanded upon by self-alleged CDE worker, Dr. Rausch, there are four different strands of the disease. I will go into detail about each strand's symptoms, as well as the contagions and ways to be infected that I have discovered so far.

All mutations initially manifest in flu like symptoms before rapidly escalating. Infection has been found to spread through SOCIAL MEDIA and occasionally beef products. Those with exposed heads are especially susceptible.

All mutations also share in one symptom, which is the experience of augmented realities and delusions. This somewhat explains for the un-humanlike and strange behavior of many infected persons.

Strand #1: Otherwise known as a Type A mutation. This mutation draws upon primitive DNA traits, making the infected person crave raw meat and blood. This strand is a zombie-like infection and creates zombie-like movements and mental states.

Strand #2: Otherwise known as Type B mutation. This mutation draws upon DNA traits and eliminates important humanoid functions. Subjects with this infection experience communications with seemingly otherworldly beings or with different time periods, changes in the makeup of their body and strange visions.

Strand #3: Combination A/B mutation. As expected, subjects display traits of both the A and B mutation.

Strand #4: Passive mutation. Subjects with this strand of the infection have activated mutated DNA but don't have any necessarily excessive outward symptoms. People with this strand share in the same overarching symptom of all mutations: delusion and experience of augmented realities. Many have reported witnessing other people take on transparent hues. This can develop into further infection or remain as is.

I hope that with this information, patterns of the infection are more clear. Protect yourself with headgear and stay away from technology and social media as much as possible for the time being. I will reach out to the public with a broadcast ASAP.

Godspeed,

Annalise Zerweier
